GRANTED

"Granted, a personal assistant for grants, make the process of writing a grant proposal easier and faster."

Problem

Grant writing is painful. For many it is difficult to express their ideas. It is also a time-consuming process.

If you hire someone to do it is very expensive. Here are some examples of average grant writing fees:

- $25-$35 per hour for grant writers with less experience
- $35-$75 per hour for grant writers with some degree of success.
- $75-$150 or more per hour for grant writers with proven success winning large grants.

Pricing may also vary based on the complexity of the grant application. A federal grant that requires pages of research, budgets and a business plan may take more than 30 hours to prepare. For a high-level grant writer who charges $100 per hour, this means $3,000 or more in grant writing fees.

Solution

Granted speeds up the process and increases your chances of approval. You simply put in a few personal details into Granted and put in some details of the granter and Granted pairs up the information to create a customized grant proposal that matches your needs with the granters needs.

AI Assisstants

There are endless Grant Management Software, but there are no grant writing assistant apps, the only competitors are overpriced grant writers that charge per hour for each grant proposal you apply for.

Keep the proposal updated by updating the data that can be converted in a JSON object that can update the proposal with GPT-3
Use GPT-3 as data mining to provide writing services to keep the dataset updated and recent
e.g. for financial analysis
Target market data

APPENDIX

Mission: Save time and avoid anxiety for grant proposal

Problem:Time-consuming process, difficult to express ideas

Soulution: Granted speeds up the process and improve the change of approval

Result: "Granted, a personal assistant for grants, make the process of writing a grant proposal easier and faster."

"The gpt-3 project wants to design a workflow system and cloud platform that enables researchers and students to request, submit and get funding for their activities. We aim to create a system that can be used for applying for EU projects, so that it will also be applicable for other calls."

Solution 3: Granted, with Artificial Intelligence based on OpenAI gpt-3 speeds up the process and improve the change of approval

"build automated grant proposal platforms, reduce human bias in grants evaluations for research institutions, universities under title.
